COVID-19 SITUATION REPORT

April 9, 2020 | Joshua Sharfstein, MD

ഹ

HTTP://CORONAVIRUS.JHU.EDU

Cumulative COVID-19 Cases By Country (Top 10 Countries)

The U.S. Has Followed the Trajectory of Other Heavily Impacted Countries

What's New This Week

Racial Disparity

Data from Detroit, Milwaukee, New Orleans, and elsewhere show disproportionate number of deaths among African Americans

For Mayors

Track data by race in your communities; Community engagement and outreach; Support access to testing and care; Develop services that permit isolation and quarantine

What's New This Week

Positive Signs

Washington State, Oregon and seeing plateau in cases; New York seeing slower rise

For Mayors

Social distancing works. Critical to maintain distancing to make further progress and support our ability to open up again.

COVID-19

CONTACT TRACING

REFRESHER

WHEN Is It Safe To Come Out Again?

CASES NO LONGER SPREADING WIDELY Fewer unlinked cases, falling case rates, contact tracing keeping up with case reports

STRONGER HEALTH CARE SYSTEM Able to withstand blip of cases without risking health care worker and patient lives

PUBLIC HEALTH CAPACITY Test patients and trace

contacts immediately, isolate the ill, quarantine contacts

REFRESHER

HOW Do We Lift Physical Distancing Restrictions?

MEDICALLY VULNERABLE CONTINUE TO SHELTER

Potentially, those with prior illness will be protected – but we don't know this yet

PRIORITIZE SOCIETAL BENEFIT

Day care, maybe schools (protecting the vulnerable), infrastructure, partial safe re-opening, sanitizer/temp checks

PREPARE TO TIGHTEN THE FAUCET IF CASES SPIKE

Test patients and trace contacts immediately, isolate the ill, and quarantine contacts effectively

CONTACT TRACING

Contact tracing of infected patients has been used on a massive scale successfully in China, South Korea, and Singapore.

It's time to get ready for contact tracing in the United States.

FOUR KEY STEPS FOR PUBLIC HEALTH

Initial notification of a confirmed or presumptive case of COVID-19.

2

Interview patients, walking through entire infectious period hour-by-hour, and recalling everyone they were in contact with during that time. Provide instructions on isolation and treatment. Identify as many contacts as possible.

Locate and notify contacts that they have been exposed, interview them to see if they have symptoms, test if they do (and in some situations, if they don't), arrange for care if ill.

Monitor contacts. Daily report on symptoms and temperature for 14 days after last contact while patient was infectious.

CONTACT TRACING KEY QUESTIONS

? Building Troops

How will your public health experts create your battalion of this army of sensitive, trained, effective contact tracers?

Resources

What community resources will be available for non-hospitalized cases and their contacts? What telemedicine/phone bank resources do you have?

Reporting and Privacy Concerns

How will you get all reports and allay concerns about confidentiality and privacy? Isolating

How to provide for voluntary isolation and quarantine?

Mandating Isolation and Quarantine

Is mandatory monitoring and isolation of the sick required? Mandatory monitoring and quarantine of the exposed?

RESOURCES FOR ISOLATED CASES AND QUARANTINED CONTACTS

Need <u>incentives</u> to manage isolation and quarantine with strong wraparound services

EXAMPLES AND IDEAS

- Masks
- Thermometers
- Food, laundry, pharmacy services
- Health education materials
- Passwords for on-demand movies, e-books, learning channels
- Access to high-speed internet & laptops
- Hand sanitizer & alcohol-based cleansers
- Encouraging note from the mayor

- Daily check-in phone calls
- Instructions of how to keep space clean for those sharing space
- A hotline for counseling, information, social services, and medical support
- Garbage removal
- Access to telehealth and care if ill
- Relocation to safe and desirable place, if requested

Financial support could include

- Stipend from government to those without sick leave or who need to take care of child or elderly dependents
- Work with employers to provide support, with possible tax credits

Support Public Health!

This is a public health emergency. Only public health can lead us out of it. Embrace Accountability and Learning!

Daily public dissemination of key metrics on testing, isolation, contact tracing, quarantine. Learn continuously to improve continuously.

THINK BIG!!

Massive (100x) expansion of care force to support, track, and care for every case and contact fast and well.

CONTACT TRACING

Ebola Case Study

In 2014, Dallas had first case of Ebola in U.S. Local government led effort to respond. County Judge Clay Jenkins headed up effort in coordination with the CDC.

Lessons Learned

Media attention can be intense. Patient privacy comes first.

Irrational fears can drive action, but rational fears must be addressed.

2

Local officials are best placed to identify local strengths and resources. Health care workers are on the front lines and must be supported.

The New York Times

Dallas Official Confronts City's Fear of Ebola in Person

Judge Clay Jenkins of Dallas County visited the apartment where Thomas Eric Duncan had been staying before his Ebola was diagnosed. Larry W. Smith/European Pressphoto Agency

ADAPTIVE RESPONSE

Loosen or tighten physical distancing according to levels of:

- Virus transmission
- Healthcare preparedness
- Public Health capacity

CONTAINMENT MITIGATION SUPPRESSION
